CHAPTER

ONE

GPU-SCRAPER

1.1 getBB module

1.2 getBH module

1.3 getNE module

1.4 interface module

This file handles the gui component of our application. It is responsible for creating the main gui and related components like popup windows or notifications.

interface.**launchGUI**()

Launches the main gui window for our application. It displays information about current queries, shows what the notifications will be like, and creates a dialog window for getting user input which will be linked to adding products.

Returns returns nothing

interface.**notification**(*product*, *source*, *price*, *belowMSRP*)

Creates a notification window in the bottom right hand side of the user's screen. It will display the given information and does not close automatically.

Parameters

- **product** (*string*) – The product available
- **source** (*string*) – The url of the product
- **price** (*string*) – The price of the product
- **belowMSRP** (*string*) – Whether or not the product is below its MSRP

Returns returns nothing

1.5 productAdder module

1.6 scheduler module

1.7 scraper module
